

ORDNANCE SUPPLY CATALOG

Group A

List of All Parts

of

**Cart, Hand, M3A4, M4A1,
and M6A1**

*Supersedes ORD 9 SNL No. A-42, 14 January 1944 and Changes No. 1,
12 June 1944.*

This is an alphabetical list of all parts required to make a complete *CART*. **WARNING: THIS LIST SHOULD NOT BE USED IN REQUISITIONING.** Many of the parts listed herein are *NOT* available for issue. Only the **Organizational Spare Parts and Equipment** section and the **Higher Echelon Spare Parts and Equipment (Addendum)** section list the parts and equipment available for issue to using troops and Ordnance troops, respectively.

This list of all parts is to be used for identification and storage purposes. In this connection it should be realized that every individual part is not necessarily stored by itself; in fact, many parts are stored as authorized assemblies. Such assemblies are indicated herein. The components, however, of such assemblies are listed elsewhere alphabetically with the number of each particular part required in a complete cart.

Standard Nomenclature Lists are published in three separate pamphlets—

(1) ORD 9 the *LIST OF ALL PARTS* section—This list will be used for **identification and storage purposes only**.

(2) ORD 7 the *ORGANIZATIONAL SPARE PARTS AND EQUIPMENT* section—which lists items issued to organizations issued this materiel.

(3) ORD 8 the *HIGHER ECHELON SPARE PARTS AND EQUIPMENT (ADDENDUM)* section—which lists major items, maintenance parts and equipment available for maintenance of this materiel. (This section is for use of Ordnance personnel only.)

Headquarters Army Service Forces 1 June 1945

ORD 9 SNL A-42

The Note Symbol column is used to carry reference symbols to notes which are listed in this pamphlet under the heading "NOTES." Note Symbols may be of letter (a) (c), character (') (♦) or SNL number (A-1) (C-6) type. *Items symbolized by an SNL number are not necessarily so stored, reviewed and requisitioned.* The SNL number symbol indicates where further usage of the item may be found. Where numbers without an SNL prefix occur as the stock number, the SNL number in the Note Symbol column indicates the SNL where the item is stored, issued, requisitioned and reviewed.

For full information relative to the Ordnance Supply Catalog, the procedure followed and the principles employed in its compilation, together with the purposes and uses thereof, see the ORD 1 Introduction, ORD 2 Index and the (OPSR) Ordnance Provision System Regulations.

Headquarters, Army Service Forces,
Washington 25, D. C., 1 June 1945.

Army Service Forces Ordnance Supply Catalog, ORD 9 SNL A-42, List of All Parts of Cart, Hand, M3A4, M4A1, and M6A1 has been prepared under the supervision of the Chief of Ordnance, and is published for the information and guidance of all concerned.

GENERAL INFORMATION

1. The hand carts covered by this SNL are for the purposes indicated.
 - a. Model M3A4—general utility carts.
 - b. Model M4A1—for transportation of caliber .30 Machine Gun.
 - c. Model M6A1—for transportation of 81-mm Mortar.
2. Cart M3A4 is basic cart which can be converted into other models by bolting additional parts through the holes provided for this purpose.
3. The M3A4 utility hand carts are composed of the chassis and body.
 - a. The chassis is composed of an offset axle, tongue and drawbar assembly. The axle is an aluminum alloy tube assembled to each end of which are aluminum alloy brackets, riveted to the axle. Steel spindles, to which the wheels are mounted on antifriction (early manufacture) or plain (present manufacture) bearings, are assembled in the axle brackets and secured by nuts and cotter pins. The tongue is an aluminum alloy tube reinforced by a liner made of the same material. The spade lunette is riveted to one end and the "tongue and axle" bracket, which fastens the tongue to the axle and body, to the other end. To the front of the body the tongue is secured by a clamp. The drawbar assembly is composed of the aluminum alloy yoke to which are assembled handles secured by rivets. The yoke is machined to fit over the lunette and is secured by the drawbar retaining pin.
 - b. The body is a rectangular shaped welded steel box bolted to the chassis. It is composed of a frame, channels and reinforcing strips.
4. The M4A1 caliber .30 machine gun hand carts are converted from the M3A4 cart by the addition of three brackets to which the legs of the machine gun tripod mount, cal..30, M1917A1 are attached. The Browning Machine Gun, cal..30, M1917, which is used with this mount, can be used as an anti-aircraft gun or tripod mount removed from the cart and the gun used as a ground gun. Straps are provided to hold in place the ammunition chests.
5. The M6A1 81-mm Mortar Hand Carts are converted from M3A4 carts by addition of brackets and supports to secure 81-mm Mortar M1, and 81-mm Mortar Mount M1 during transit. The brackets and supports are equipped with quick release clamps to facilitate speedy unloading of the cart. Straps are also provided to hold in place ammunition chests.
6. The carts are drawn by manpower and in addition are equipped with a lunette for limbering to a motorized or animal-drawn prime mover. When drawn by manpower the drawbar is secured to the lunette with the drawbar retaining pin. When not in use the drawbar is carried on the drawbar bracket which is riveted to the front of the body. Provision is made for attaching tow ropes on the cart body when additional manpower is required to pull the load.

ORD 9 SNL A-42

7. The carts are so designed that two loaded carts can be transported on trucks when placed between the seats provided for personnel.

8. Canvas covers are provided for each type of cart. The covers are attached by means of snap bolts (which engage the loops on the cart body) in addition to the tie rope which passes around the body of the cart and drawn tight when the cover is in place.

9. Maintenance.—Lubricate the wheels by applying wheel bearing grease (Specification AXS-422) by means of pressure gun through the fitting on the wheel hub. The wheels are packed in grease at assembly and it is only required to add a moderate amount of grease approximately every 500 miles of travel. The assembly is oil sealed and care must be taken not to force in too much of grease which may break the oil seal. After approximately 1000 miles of travel the bearings should be removed for examination and all parts of the hub assembly cleaned.

Notice of discrepancies or suggested changes should be directed to Office, Chief of Ordnance, Field Service, Maintenance Division, Military Publications Branch, SPOFM-Pub., Washington 25, D. C.
